

What WHAT is Zincalume Alloy?

In North America, it's generally known as Galvalume[®] and across the world it is marketed under Zincalume[®] and other brand names. But whatever the name, one thing is certain: 55% Aluminum-Zinc coated steel is the magic formula for roofs and roofing materials.

In bare unpainted form, it outperforms all other metallic-coated steels, giving more than twice the life of an ordinary zinc coating of the same thickness and providing superb cut-edge protection against corrosion. Comprehensive field inspection reports shows that even in low-pitch standing seam roofs it has a life expectancy of well over 40 years.

LIFE EXPECTANCY OF 55% Al-Zn COATED STEELS IS AT LEAST TWICE THAT OF HOT DIP GALVANIZED

Long-term evaluations show that 55% Al-Zn sheets will have a life of >30 to 40+ years, except in severe marine applications, and at least twice the life of galvanized steels
